About

Hi! I am Christoffer, 24 years old. I have just finished my Master of Science in Interaction and Design, and is now looking for new challenges and opportunities.

I am driven to create digital solutions that enhance and simplify. With a strong work ethic, I always strive to deliver high-quality, robust, and scalable code as well as a solid user experience.

Education

Umeå University   2019 - 2024
M. Sc. - Interaction Technology and Design

The program that "makes you an expert in the interaction between humans and machines."

Work Experience

Omegapoint - Master Thesis   2024

I investigated how different aspects of usability affects the percieved security of websites. To do this, I built a fictional E-banking solution with a frontend in **React** and backend in **Node** + **Express** & **MongoDB**, which was then deployed in **AWS**.

QA Summer Intern @ Nasdaq   2023

I evaluated how various frameworks (e.g. **Selenium** & **Playwright**) for automated E2E-testing could be implemented in one of their products (10 weeks).

Curiosum - Umeå University   2022 - 2023

I worked as a visitor guide at the Science Center during weekends and evenings. Duties included welcoming visitors, facilitating workshops, and coordinating activities.

Other Experience

Umeå Budoklubb - Frontend   2023

As part of the course "Software Engineering", 40-50 students in eight different teams were to develop a planning tool for a local martial arts club. I took the initiative and organized a workshop for the entire group on the basics of React. Furthermore, I participated in meetings with the client, acted as Scrum Master during two sprints, and took part in the overall design and development work.

Technical Competence

I am proficient in **JavaScript**, **CSS**, **HTML**, **TypeScript**, and **React** for frontend development, and I also have experience in backend development using tools like **ASP.NET**, **Entity Framework**, **NodeJS** + **Express**, and **SQL**. My programming skills have a solid foundation in **Java** and **C**, and tools like **Git** and **GitHub** are routine.

Visit my website christofferbillman.se to see projects I have worked on both privately and during my time at university.
