About

Hi! I am Christoffer. I have just finished my Master of Science in Interaction and Design, and is now looking for new challenges and opportunities.

I am driven to create digital solutions that enhance and simplify. With a strong work ethic, I always strive to deliver high-quality, robust, and scalable code as well as a solid user experience.

Education

Umeå University   2019 - 2024
M. Sc. - Interaction Technology and Design

The program that "makes you an expert in the interaction between humans and machines."

Work Experience

Omegapoint - Master Thesis   2024

I investigated how different aspects of usability affects the percieved security of websites. To do this, I built a fictional E-banking solution with a frontend in **React** and backend in **Node** + **Express** & **MongoDB**, which was then deployed in **AWS**.

QA Summer Intern @ Nasdaq   2023

I was responsible for evaluating how various frameworks (e.g. **Selenium** & **Playwright**) for automated E2E-testing could be implemented in one of their clearing solutions, Nasdaq Real-Time Clearing. This resulted in three test suites in different frameworks, and a comprehensive report which became a solid foundation for future work.

Curiosum - Umeå University   2022 - 2023

I was responsible for welcoming visitors, facilitating workshops, and coordinating activities as a visitor guide at the Science Center during weekends and evenings.

Other Experience

Umeå Budoklubb - Frontend   2023

As part of the course "Software Engineering", 40-50 students in eight different teams developed a planning tool for a local martial arts club. I took the initiative to organize a workshop for the entire group on the basics of React, which was well-received by many students and contributed to the project's success. Furthermore, I participated in meetings with the client, acted as Scrum Master during two sprints, and took part in the overall design and development work.

Technical Competence

I am skilled in **JavaScript**, **CSS**, **HTML**, **TypeScript**, and **React** for frontend, and have backend experience with **ASP.NET**, **Entity Framework**, **NodeJS** + **Express**, and **SQL**. My programming foundation includes **Java** and **C**, and I am proficient with tools such as **Git** and **GitHub**. Visit christofferbillman.se to view an assortment of hobby and university projects I have completed.
